

IN THE CLAIMS

Please delete Claims 1-61.

Please add Claims 62-68 as follows:

--62. A method for a server, comprising:

receiving from a client device over a wireless link a request for access to a resource in a data network, said request comprising a resource locator and authentication information regarding said client device or a user of said client device;

determining if said authentication information sufficiently supports said request;

accessing said resource and receiving information resulting from said access;

generating a response to said request based on said information; and

transmitting said response to said client device over said wireless network.

63. The method of Claim 62, wherein said resource locator identifies a message to be accessed.

64. The method of Claim 63, wherein said message is provided in a markup language.

65. The method of Claim 62, wherein said response comprises a distillation of said message according to a set of predetermined rules.
